

Chalet Luxury at Home

Enjoy all the decadent comfort of an open wood fire in your home this winter, with none of the fuss! Cannon brings the warmth, atmosphere and romance of a wood fire to your home without the work, odour and mess.

Designed and built specifically for Australian homes and conditions, Cannon gas log heaters suit large living spaces and provide fast room heating with high energy efficiency and economy.

They can now be installed virtually anywhere - for those without an existing chimney, Cannon's Mock Fireplace kit allows a heater to be safely installed into a combustible wall and flued through the wall cavity.

Along with ease of installation, safety is also a high priority in the design of Cannon heaters and all models are fitted with either a protective mesh guard or a double glazed glass window.

Four NEW models ensure a perfect fit in all environments from sleek urban abodes to classically furnished rustic homes. Realistic eucalypt logs and a natural flame appearance complete the package for a truly authentic cosy winter feel.

THE RANGE
